

WIN WITH

AvaC™

## The Innovation for low-pressure carburizing with acetylene

AvaC™ process and multi-cell “open system configurations optimized for maximum results:

- Continuous high throughput capability
- Guaranteed process repeatability
- Patented optimum acetylene gas deployment
- Open, maintenance-friendly modular system
- AvaC™ process increases carbon transfer, reduces process time, improves microstructure, increases stress resistance, and yields superior surface quality
- Economical extendibility for capacity increase
- Various quenching media capability: helium, nitrogen, mixed blend gas, and oil
