# Global V

## Vacuum Technology for Vertical Production Applications

The Global V addresses user's demand for structural economy, controls functionality, and floor space conservation.

### Simplified Bottom Head Lifting System

- Less parts to maintain
- Easier alignment at installation
- Self-lubricated sliding guide system

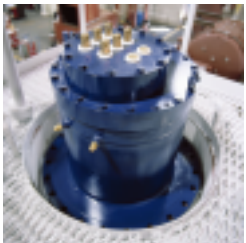

### Convection Assisted Heating Option

- CFC Fan
- Water cooled fan motor
- Faster heating of large loads

### Water Cooled Gas Recirculation Motor

- 2-speed for controlled cooling
- Operates up to 250% F.L.A. of quench
- Faster cooling rates

### Low Mass Curved Graphite Heating Elements

- More work space clearance to heating elements
- 50% Reduction of element joints
- Graphite fasteners

*The Future is Now*
